

Yuezhexuan(Jason) Zhu

(858)241-5970 | jaz019@ucsd.edu | [Personal Website](#) | [LinkedIn Page](#) | [GitHub](#)

Education

University of California, San Diego

Sep 2025 – Jun 2027 (Expected)

Master of Science in Computer Science

University of Toronto

Sep 2020 - Jun 2025

Bachelor of Science in Computer Science | GPA: 3.96 / 4.00

Highlights of Qualifications

Language: C/C++, Python, Golang, Java, TypeScript & JavaScript, Shell Script, Lua

Framework & Tool: Git, Docker, Postman, SpringBoot, PyTorch, TensorFlow, LLVM, React, Angular, Jenkins

Middleware: MySQL, Postgres SQL, Redis, RocketMQ, Kubernetes, Elastic Search, Nginx

Competitive Coding: [Leetcode global ranking](#), historic height: 2355 (top 0.52% globally)

Internship

Backend Developer Intern, ByteDance, Shanghai

Apr 2025 – Sep 2025

- Member of the “Global Payment Network” team, focusing on Credit/Debit Card payment and 3D Secure authentication
- Designed encryption & validation mechanism for 3DS to enhance payment security, safeguarding **100k+ transactions daily**
- Mitigated financial risk by identifying a vulnerability in refund logic; collaborated with QA and operations to implement a robust fix and enable accurate tracking of **100+ daily channel refunds**
- Enhanced system robustness by collaborating with PMs to design technical improvements for multiple payment channels; and led channel standardization for “Worldpay” to transform channel-specific logics into unified pipelines & configurations

Software Engineer Intern, IBM Canada

May 2023 – Aug 2024

- Member of the [Refactoring Assistant](#) team for product IBM Watson Code Assistant for Z ([WCA4Z](#))
- Contributed to the standardized automation tool for modernizing legacy mainframe COBOL code; focused on full-stack development for analyze-refactor section and maintenance & extension of team’s CI-CD pipeline
- Designed an automated testing pipeline that eliminated repetitive manual tests and saved over **30 hours per release cycle**
- Developed full-stack features (React, SpringBoot) and automated testing/deployment (Cypress, Jenkins) to ensure quality

Lab Intern, Pardee Lab at University of Toronto

May 2022 - Sep 2022

- Established high-performance GPU server on cloud for [AlphaFold2](#) and budget-efficient server infrastructure
- Constructed machine learning guided bio-similar protein prediction [pipeline](#) with a high level of automation
- Encapsulated initialization scripts and set up remote desktop to increase friendliness for non-professionals

Project & Research

Main Developer & Maintainer, [UTLeetcoder](#)

Dec 2022 - Present

- Designed and maintained a full-stack web platform adopted by 40+ University of Toronto students; tracked registered users’ coding progress & statistics using Leetcode’s API and manage data using database for hourly granularity + user ranking
- Automated backend updates with GitHub Actions and deployed via [GitHub Pages](#) for high extensibility and availability

Main Developer, Web Programming Course Project ([Toronto Fitness Club](#))

Sep 2022 - Dec 2022

- Built a full-stack web application that provides studio details, membership purchase, and course enrollment
- Implemented frontend with React + Material UI, backend with Django + SQLite, and connected via Axios API client

LLM Performance Analysis on Multi-label Coding Question Classification ([Course Project](#))

Jan 2023 – May 2023

- Constructed two models based on pre-trained BERT and LSTM, applied transfer learning, and compared their performances
- Became experienced in designing Deep Neural Networks by finetuning mature modules and realizing them using PyTorch

Video and Content Creator

Apr 2020 - Present

- Representative published works: [Flow Field](#), Fourier Transform [interactive platform](#), and [Deep Dream Transformer](#)
- Showcased creative applications of software engineering to a broad audience via [personal website](#) and YouTube [channel](#)
